We are glad to inform you that it is now available our updated version of the **complete software for sequential fuel injection system. (Version 5.0.0C with Firmware 28.00)**

Among main new characteristics, we would like to highlight:

1. **New graphic** customized following the design of our website www.tartariniauto.it ;
2. **New diagnosis**, which allows independent selection of each singular gas injector and of front/rear system solenoids. The functionality related to the injectors (injector control) allows finding out mistakes in polarity connections of the cut-off injector wirings and also incorrect connection sequences of the cylinders.
3. **Possibility of independent functioning of each cylinder with gas or petrol.**

E-mail: info@tartariniauto.it · www.tartariniauto.it

4. **New strategy for controlling solenoids** without extra filling in hoses that permits a higher control and stability during the first switching phase.
5. **MJ sequential injection strategy**, allows better driveability on those car engines which use extra-injections even in high load and high engine revolutions.

It is possible to download the complete software from the private area of our www.tartariniauto.it website, **Car Data Sheet / Technical Area / Software Programs / Sequential Fuel Injection System / SGI Software version 5.0.0C.zip**

We remain at your complete disposal for any further information or clarifications.

Best regards
