To all our customers

SUBJECT: “DIRECT INJECTION” SEQUENTIAL SYSTEM SOFTWARE

We kindly inform you that you may now find on our website the **software of the new sequential system “Direct Injection”** for 3-4 cylinder vehicles.

This software with updated graphic includes more advanced command strategies compared to the other sequential systems available on the market at the present time (particular strategies that are necessary for the sophisticated engine control on this type of vehicles), and offers a simplified user-friendly interface that allows usage of the following functionalities:

1. **Loading ECU** with dedicated **Firmware & Configuration Files** that will be supplied from Tartarini Auto for the different vehicle models that have already been tested. The list of tested vehicle models will be continuously updated and sent to you upon specific request.
2. Configuration of the type of **level sensor** installed;
3. Regulation by means of a simple value that is related to a change in percentage of the carburetion, in order to adapt the system to the differences among the same model of vehicle.
4. **Diagnosis control** exactly like in our Standard sequential software;
5. **Display of the function parameters** of the system.

It is possible to download it by connecting to the Private Area of the website www.tartariniauto.it (section **Car Data Sheet / Language Menu / Software Programs/ Direct Fuel Injection System/** file name **Software-Direct Injection Version 1.0.6 I.zip**).

We remain at your complete disposal for any further information or clarifications.

Best regards

TARTARINI AUTO SPA
